Installed services include: The Apache Cassandra server, labeled DataStax Cassandra Community Service. The DataStax OpsCenter management tool, which includes both the OpsCenter service used to manage and monitor Cassandra, and the OpsCenter agent, which is used to gather metrics and carry out various tasks on every Cassandra node. If you use Mac OS X as your platform for development work, then you may be interested to know how easy it is to use Apache Cassandra on the Mac.

1. [cqlsh](#)
2. [cqlsh install](#)
3. [cqlsh download](#)

HDFS can be accessed from the hdfs account using HDFS linux commands. See Section Examples below for just a few basic examples to get started with each.

cqlsh

cqlsh, cqlsh show tables, cqlsh list keyspaces, cqlsh commands, cqlsh install, cqlsh show keyspaces, cqlsh connection refused, cqlsh python 3, cqlsh timeout, cqlshrc, cqlsh list tables

Then uncompress the file (whose name will change depending on the version you're downloading):
